

## WHAT IS OCCUPATIONAL & ENVIRONMENTAL HEALTH NURSING

Occupational and environmental health nursing is the specialty practice that provides for and delivers health and safety programs and services to workers, worker populations and community groups. The practice focuses on promotion and restoration of health, prevention of illness and injury, and protection from work-related and environmental hazards. Occupational and environmental health nurses (OHNs) have a combined knowledge of health and business that they

## Occupational and Environmental Nurses Today

Modern roles of OHNs are as diverse as clinicians to educators, case managers to corporate

not only the responsibilities previously stated, but also a wide range of job duties, including but not limited to:

**Case management:** OHNs routinely coordinate and manage the care of ill and injured workers. Their roles as case managers have grown more sophisticated with the coordination and management of work-related and non work-related injuries and illnesses, which include aspects related to group term/long-term disability benefits.

**Counseling and crisis intervention:** Besides counseling workers about work-related illnesses and injuries, OHNs often counsel for issues such as substance abuse, psychosocial needs, wellness/health promotion concerns, and other health or work-related concerns. They may also assume primary responsibility for managing employee assistance programs or handling referrals to employee assistance programs and/or other community resources, and coordinate follow-up. e injuries, OHNs ofte

**Health promotion and risk reduction:** OHNs design programs that support positive lifestyle changes and individual efforts to lower risks of disease and injury and the creation of an environment that provides a sense of balance among work, family, personal, health, and psychosocial concerns.

Immunization, smoking cessation, exercise/fitness, nutrition and weight control, stress management, monitoring of chronic diseases, and effective use of medical services are just a few of the preventive strategies to keep workers healthy and productive.

**Legal and regulatory compliance:** Whether it is the array of state and federal regulations put

## Education Requirements

OHNs are nurses licensed to practice in the states in which they are employed. Typically, nurses entering the field have a baccalaureate degree in nursing and experience in community health, ambulatory care, critical care, or emergency nursing. Many OHNs have obtained Masters Degrees (e.g., in public health, advanced practice, business) to continue to build their professional competencies. Certification in occupational and environmental health nursing is highly recommended. In 2011, AAOHN voted to invite our nursing LPN/LVN colleagues to join the association as active members. We hope to represent their needs by providing guidance in setting scopes of practice, ethics, and education to enhance their practice of occupational health.

## AAOHN

For more information about occupational and environmental health nurses, contact the American Association of Occupational Health Nurses, Inc. at 312-321-5173 or [info@aaohn.org](mailto:info@aaohn.org).

AAOHN is a professional association of more than 4,000 members dedicated to advancing the health, safety, and productivity of domestic and global workforces by providing education, research, public policy, and practice resources for occupational and environmental health nurses. These professionals are the largest group of health care providers serving the worksite.
